

# Open burners & Ecoflam

For Celtic, Armen, Elite ranges

**CAPIC is on fire!**

The new open burner 7 kW with a stainless steel body (exclusively from CAPIC) has all the characteristics of an exceptional burner: twin flame crown in massive brass, a stainless steel body, pilot light with a protected thermocouple, a removable and stamped anti-overflow bowl + drip tray below the burner, and stainless steel and brass gas pipes.

Associated with the new technology :

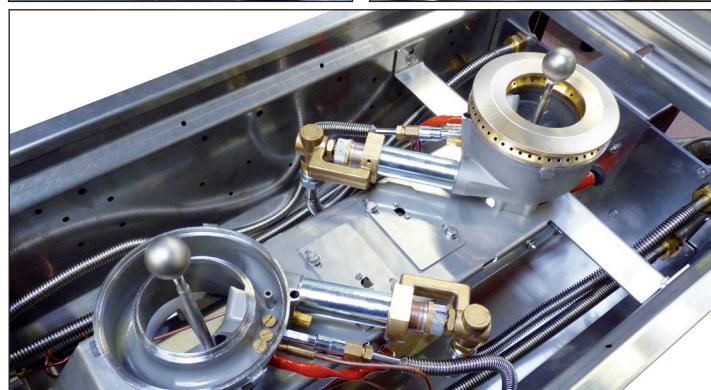

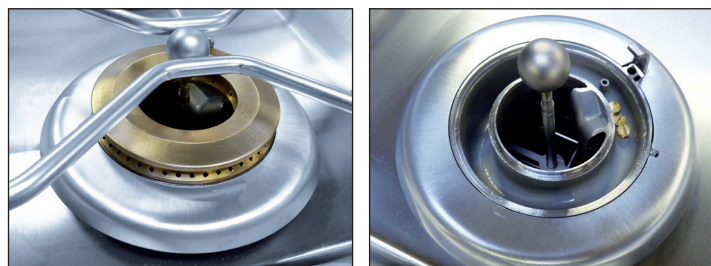

## The Ecoflam system

Automatic activation of the open burners thanks to an opening or "locking" of an electro-valve which activates the gas flow. A simple touch or sliding a container on a stainless steel sphere activates the system.

It is possible to "override" the system in order to use accessories such as a Wok,...

## Advantages:

- It saves around 30% gas in a commercial catering service.
- It decreases by 90% technical interventions (pilot light and thermocouple).
- Reduces cleaning time by 20%.
- It doubles the life expectancy of the burner.
- Time-saving of 10% for the increasing of temperature.
- Modular flexibility: the 7kW burner can be easily turned into a 9kW burner..

**CAPIC - Reactivity - Quality - Innovation.**
